Take a glimpse inside the Bagley College of Engineering at Mississippi State University:

Become globally-versed in automotive materials engineering through the **Mississippi State University** collaboration with the **Université Internationale de Rabat** School of Automotive Engineering.

This dual academic-award program will allow UIR students to earn a diploma of engineering from their home institution and bachelor’s and master’s degrees from Mississippi State University, a fully-accredited research university in the United States of America. Through this program, students will complete the first three years of their undergraduate education at the Université Internationale de Rabat. They will then complete their fourth year and begin a graduate degree program at Mississippi State University.

Mississippi State University is home to the nationally ranked Bagley College of Engineering and is a global leader in automotive and materials-related research. With cross-disciplinary research centers, working groups and laboratories, and faculty who are considered leaders in their fields, Mississippi State can offer students experience in automotive design, composite materials, lightweight metals, power systems, advanced electronic materials, alternative energy, multi-scale modeling and more.

For more information about Mississippi State University’s Bagley College of Engineering and its partnership with Université Internationale de Rabat, including the curriculum and research capabilities, visit www.bagley.msstate.edu/UIR.
